

Key benefits

Waterproof

- Impregnating the edges makes 5G a waterproof connection.
- NALFA: 120 h waterproof

5G installation:

- quick and easy installation
- no additional tools or adhesives required

High suitability for everyday use:

- Scratch and impact resistant: hard wear layer makes it ideal for living rooms, hallways and children's rooms
- Easy to care for: simple cleaning, no special care products required
- Colours & finishes: wide selection of wood, stone or fantasy finishes

NEW: 5G GOES WATERPROOF

Maximum safety for your floors – innovation meets design.

The Swiss Krono logo, featuring a stylized 'K' inside a red circle, followed by the brand name 'SWISS KRONO' in a bold, white, sans-serif font. The background of the entire right side of the advertisement is a dynamic splash of water on a wooden floor, with water droplets and splashes in various shades of blue and white.

5G goes waterproof

Thanks to innovative edge impregnation, the 5G click system locks the panels tightly and securely together. Moisture stays out – for peace of mind with every step. This keeps your floor beautiful, stable and protected, even when everyday accidents happen.

The waterproof 5G connection not only provides additional security, but also ensures long-lasting enjoyment of your floor. Whether it's children playing, pets or minor mishaps – your floor remains reliably protected and retains its high-quality appearance.

Robust, worry-free and made for everyday use.

Areas of application

Technical overview

Features	Details
click system	5G locking mechanism, stable and easy to install
water resistance	Up to 120 hours - NALFA
material	HDF core board
strength	8 -14 mm
usage class and abrasion	33/ AC5
warranty	Up to 30 years on many collections.
ecology	90% wood content – environmentally friendly and low emissions
