

INSTALLATION

PREMIUM WOOD & PREMIUM STONE

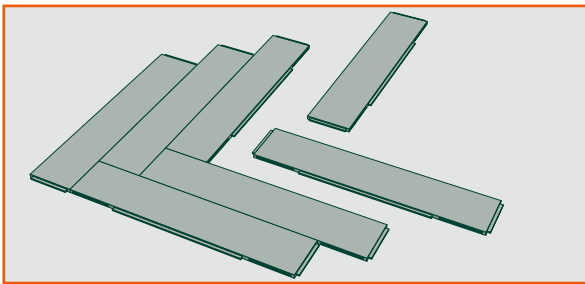

2G 2G™ angling installation system

— The 2G™ system enables quick and secure installation without special tools. The panels are locked into place at an angle along the long side and then connected at an angle along the short side. The connection is purely mechanical – no glue

is required – and ensures a durable and stable click connection. The system allows for quick installation and is suitable for both professional installers and DIY applications.

PREMIUM HERRINGBONE

UNIZIP®
PATENTED TECHNOLOGY

— The UNIZIP® system greatly simplifies the traditional, time-consuming process of laying herringbone floors. Instead of two different panel types, only one panel type is required. The short side is snapped directly into the long side of the adjacent

panel – clean, quick, and precise. The system significantly reduces installation errors and installation time. This allows herringbone floors to be laid efficiently and accurately.
